

City of Brewer – Public Works
New Snow Pusher

This is a new snow pusher built in-house, to save on cost, by the Public Works Maintenance Crew. The new pusher will be used to clear large parking lots such as at the High School, Auditorium and off the end of Acme Road by the Ice Arena. The pusher is approximately twice as wide as a traditional bucket and is specifically designed to move large volumes of snow. This is not the first of such items built by the Maintenance Crew; they have also built a V-plow and push frame for our sidewalk machine and rebuilt several plow for City trucks at a substantial savings to the City.
